

e.) Remarks/Arguments.

In the Specification, Abstract, and Drawings:

1. The paragraph beginning at line 8 of page 1 has been amended to clarify the definition of the coiled fiber loops according to the dictionary (see attached copy of the dictionary pages on definition of a word *coil*).
2. The paragraphs beginning at lines 11 and 15 of page 7 and line 11 of page 38 have been amended according to the definition of the coiled fiber loops mentioned above.
3. The paragraphs beginning at line 2 of page 10, line 28 of page 27, and line 8 of page 33 have been amended, i.e., ratio 6000 to 1 was corrected and replaced by ratio 9000 to 1 according to results of calculations presented in Table I (line 10) of the Specification.
4. The paragraphs beginning at line 6 of page 17 and at line 22 of page 19, Table I of page 27, and Table II of page 28 have been amended because of errors.
5. The paragraph beginning at line 20 of page 23, part of the Appendix beginning at line 36 of page 40, and equations (30)-(32) of page 57 have been amended along with the application drawing Fig. 6, because of an error, i.e., according to the Specification a linear speed V_{rotation} is a linear surface speed of the rollers or spindles and cannot be perpendicular to radiuses OP or OK in Fig. 6 but it rather goes along the fiber section KP.
6. In a few places, we replaced wording "controlled fiber loops" by "coiled fiber loops" (the paragraphs beginning at line 1 of page 7, line 12 of page 13, line 13 of page 16, and line 6 of page 36) or "successive fiber loops" (the paragraph beginning at line 15 of page 7) that correspond better to the title of the patent application and the rest of the Specification.
7. The application drawings 7a and 7b have been combined in one drawing 7 where we have added, for comparison, typical stress-strain curve for polypropylene fibers produced by conventional technology.

8. The rest amendments in the Specification are minor changes, corrections, and clarifications.

In the Claims:

All amendments of the Claims are supported by the Specification and have not introduced new matter.

1. Just as in the Specification, we replaced wording "controlled fiber loops" by "coiled fiber loops" in claims 7, 8, 23, 29, 44, and 50 that correspond better to the title of the patent application and the Specification.

2. Throughout the Claims, we replaced wording "conveyer-drawing means" by "conveyer-drawing members" that is better supported by the Specification.

3. We added wording "...contact points between the fiber and the spindles (or rollers) being not permanent" in claims 11, 15, 32, 36, 53, and 57 that is supported by the Specification.

4. Claims 17, 20, 38, 41, 59, and 62 have been cancelled. The rest of amendments in the Claims are minor changes, corrections, and clarifications.

Applicants respectfully request that a timely Notice of Allowance be issued in this case.

Respectfully submitted by applicants:
